

git & github²

Intro to Git and Host your Project!

Nan Zhao | n.zhao0320201@arts.ac.uk

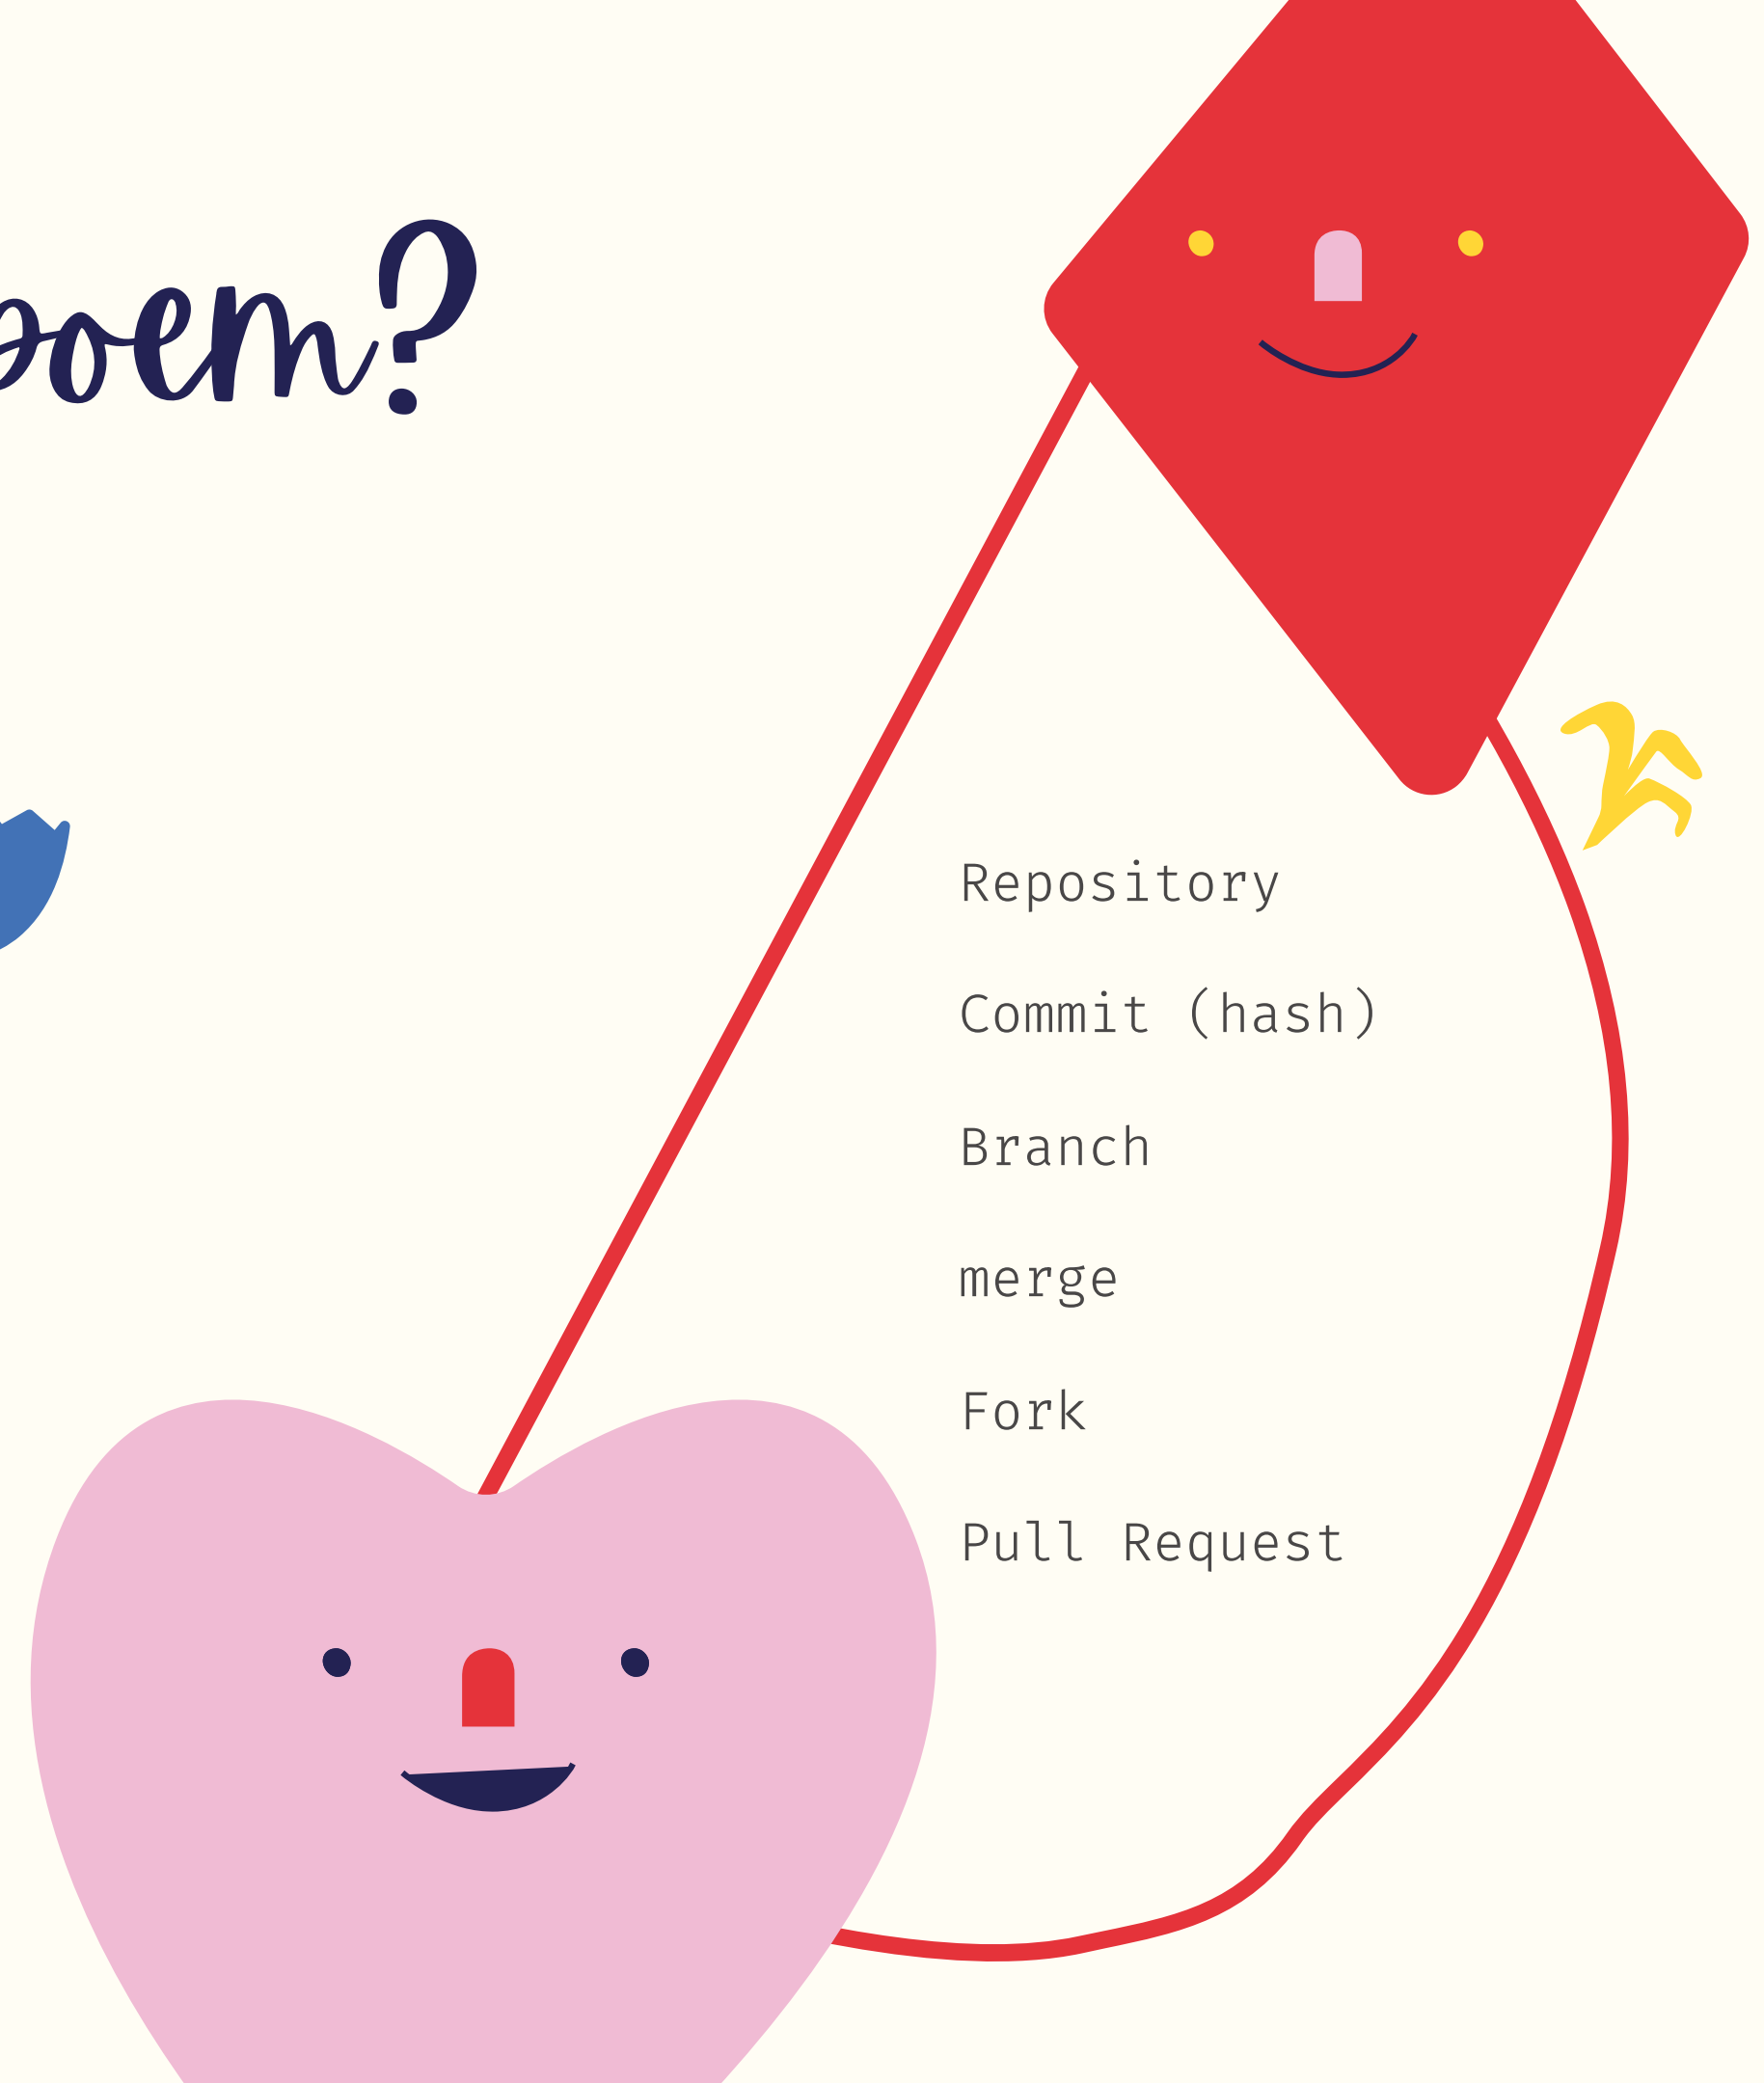

Have u written ur poem?

//What we have done

1- Intro to Git & Github

2- Branches

3- Forks and Pull Requests

What we are going to do

Workshop 2: Use Git locally & Master the command lines

Learn how to use git locally on the computer with command lines. Understand different command lines. Host your MIMIC works on Github pages!

Intro to the Command Line

How to Use

- Mac: Terminal
- Windows: Download Git Bash: <https://git-scm.com/downloads>

Common Commands (with file system)

- cd, pwd, ls, help, clear
- some tricks

Git cheatsheet [here](#).

Intro to the Command Line

➤ % cd

➤ % pwd

➤ % ls

% clear

% open .

Some Tricks:

cd ..

tab

up-arrow

drag

Search or jump to...

git push & pull

Clone, push, pull

Step 1:

Let's "download" our poem repo on your computer!

```
$ git clone
```

```
$ git status
```

```
$ git commit
```

```
$ git commit -a -m "I am the message"
```

```
$ git config --list
```

```
$ git log
```

```
$ git push origin master
```

Quick Recap

What we have done together

- create a new repo on Github
- clone it to our laptop
- make some changes, commit and push it back

while doing that we realize we need

- install git
- Know about Unix commands
- make sure my global username and email settings are configured.
For the user name stuff, you don't have to do it again.

Now what we are going to do:

- show how to make a fresh repo from an existing folder on your computer and send that to Github.

Step 2: Live

How to start
with your local computer?

git init, git add

Github

```
$ git init  
$ git add
```

On Github
in last workshop

commit

save

Locally

save

commit

add

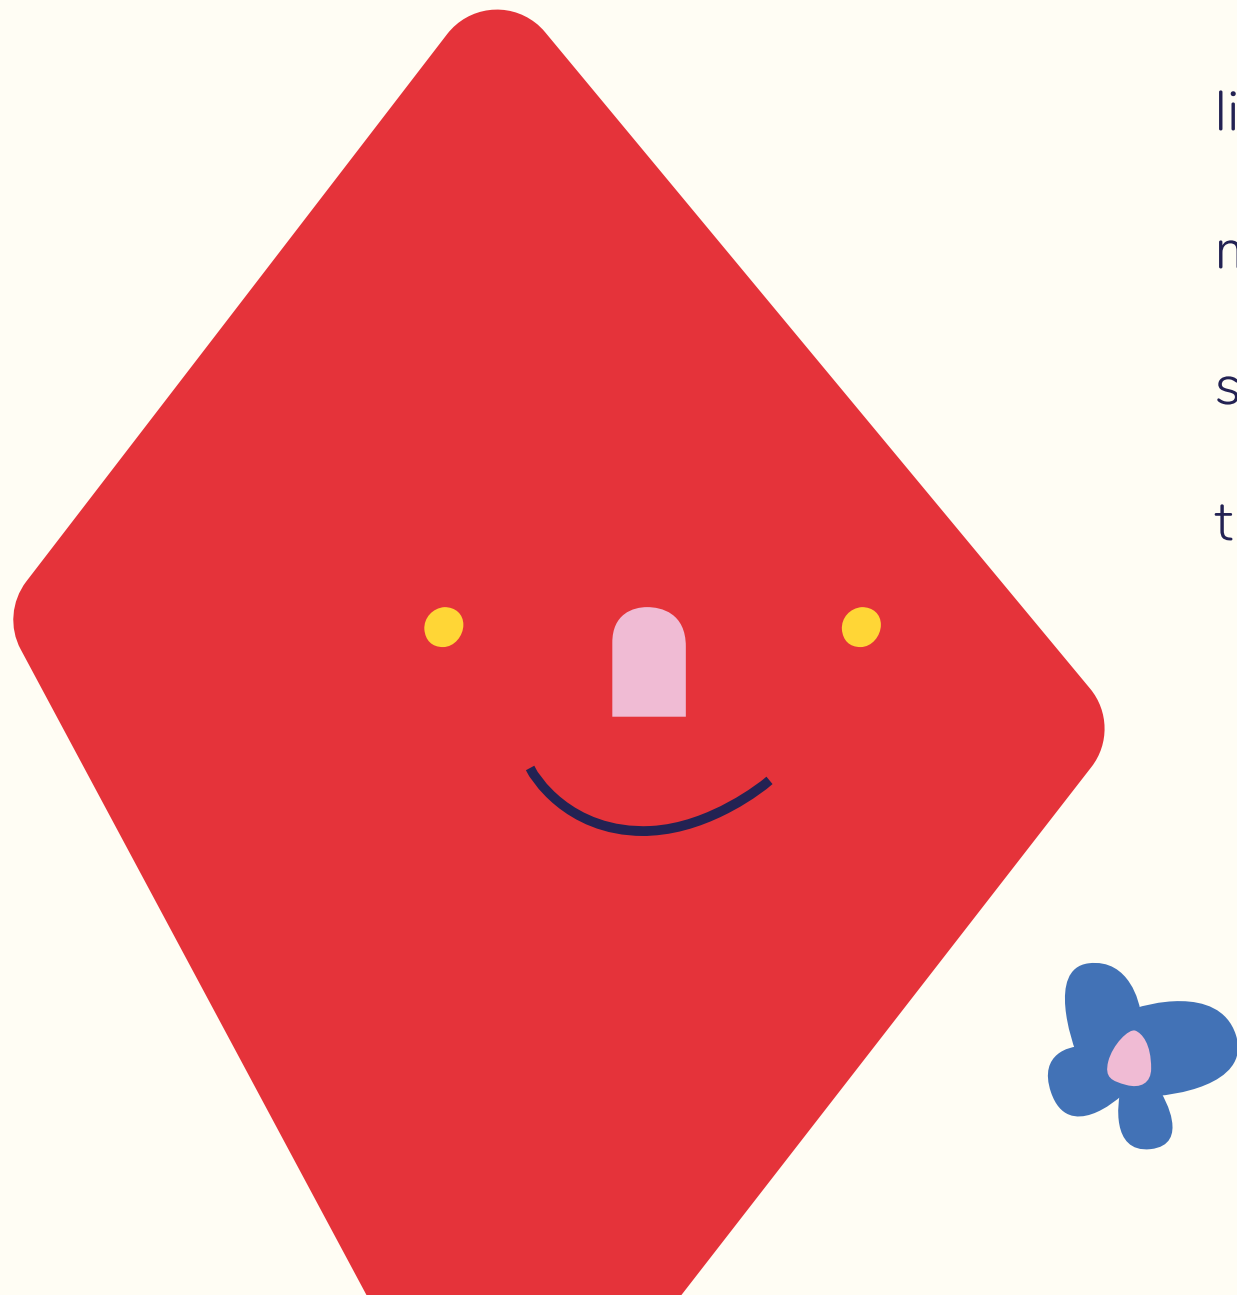

poem-try.html
outline.txt
good.png
poem-1.txt
poem-2.txt
poem-3.txt
...

Recap

what we looked at is

I have files on my computer,
I turned those files into a Git repository,
then I created an empty repository on GitHub,
linked it together, pushed the files up,
made a change on GitHub, pulled them down,
so now I have a way
that I can just work locally or work remotely.

Terms we have covered

- git init
- git add
- git push/pull origin master
- git remote add origin +URL

Cheatsheet & Resources

- Our Poem Github Page:
- Git command cheatsheet: <https://education.github.com/git-cheat-sheet-education.pdf>
- <https://guides.github.com/features/mastering-markdown/>
- Visual Tool to use github: <https://desktop.github.com/>
- For window systems, down Git Bash: <https://git-scm.com/downloads>

Try them now~!
